Trumbauersville Municipal Water System May Be At Increased Risk From Microbial Contamination.

We routinely monitor the conditions in the distribution system. On 9/6/2023, we experienced a loss of positive water pressure due to a broken pipe. A loss of positive water pressure signals the existence of conditions that could allow contamination to enter the distribution system through back-flow by back-pressure or back-siphonage. As a result, there is an increased chance that the water may contain disease-causing organisms.

What should I do?

DO NOT DRINK THE WATER WITHOUT BOILING IT FIRST. Bring all water to a rolling boil, let it boil for one minute, and let it cool before using, or use bottled water. You should use boiled or bottled water for drinking, making ice, washing dishes, brushing teeth, and food preparation until further notice.

Inadequately treated water may contain disease-causing organisms. These organisms include bacteria, viruses, and parasites, which can cause symptoms such as nausea, cramps, diarrhea, and associated headaches.

These symptoms, however, are not caused only by organisms in drinking water but also by other factors. If you experience any of these symptoms and they persist, you may want to seek medical advice.

Guardians of infants, young children, and people at increased risk, such as pregnant women, some of the elderly, and people with severely compromised immune systems, should seek advice from their healthcare advisors about drinking this water. General guidelines on ways to lessen the risk of infection by microbes are available from EPA's Safe Drinking Water Hotline at 1 (800) 426-4791.

What happened? What is being done?

A pipe in wellhouse #3 broke which caused the storage tank to back siphon to the break. After the water was completely drained, the system had no positive pressure. We notified PA DEP within one hour and restored service within three hours. We advise you to boil your water before you drink it until the results of bacterial analyses are returned from the laboratory for two consecutive days. We will notify you when the water is again safe to drink.

We will inform you when all corrective actions have been completed and when you no longer need to boil your water.
